

SureShade ATF Automated Shade

Get more sun protection with a **SureShade® ATF Automated Shade** installed on your boat!

Featured on many new boat models, boaters can now get SureShade's **same factory-quality shade systems** as an aftermarket upgrade to new or existing models.

Using our patented telescoping framework, **SureShade ATF** electrically extends or retracts shade, giving you control over how much shade you want in the cockpit or bow of a boat.

- Ideal for boats under 30 feet (9 meters)
- Electrically extend or retract shade

How SureShade ATF Works

The SureShade ATF automated tele-frame shade utilizes a patented telescoping tubular framework to automatically extend or retract canvas at the touch of a button. Designed specifically for the marine environment, this electric power-driven shade system can be installed on any boat or yacht with sufficient overhead structure (such as a hardtop, arch or bridge).
